DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1, 5-8 and 10-14, 17 and 18 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for aliphatic monocarboxylic acid having 4 to 30 carbons atoms, does not reasonably provide enablement for aliphatic monocarboxylic acid having less than 4 carbon atoms. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to use and/or make the invention commensurate in scope with these claims. Applicants clearly shows by way of examples that when tin salts of C₄-C₃₀-aliphatic monocarboxylic acid that are in contact with an oxygen supplying substance their melting point is substantially lower as compared to the tin salts of C₄-C₃₀-aliphatic monocarboxylic acid without addition of an oxygen supplying substance. However, as noted in tables 1 and 2, the formation of stannous acetate does not shows a reduction in melting point when contacted with an oxygen supplying substance and therefore it is clear that C₁-C₃ aliphatic monocarboxylic acids will not produced a low melting point tin salt.

Allowable Subject Matter

4. Claims 2-4, 9, 15 and 16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
